Objections To Claims

Claim 9 is objected to under 37 CFR 1.75(a) for the following reason:

In claim 9, "the reference supply of fuel" (line 2), and "the pressure drop spill valve" (line 3) lack antecedent basis. Claim 9 depends from claim 6 but the cited items are introduced in claim 7, hence, claim 9 should depend from claim 7 rather than claim 6.

Allowable Subject Matter

Claims 1-8 are allowed, and claim 9 will be allowed when the above objection is overcome.

Reasons For Allowance

The present invention is a fuel control system for a staged combustion engine (gas turbine) in which fuel is supplied to both primary and secondary burners through a metering valve followed by a pressurizing shutoff valve, and fuel is initially supplied to the primary burners for starting. Fuel systems having metering valves and pressurizing

Art Unit: 3746

shutoff valves along with primary and secondary (or pilot and main) burners are well known in the art, as indicated by the references cited on PTO Forms 892 and 1449. All such systems also require some type of provision to supply fuel for starting. None of the references of record, however, disclose or fairly suggest a system of this type in which a pressurizing shutoff valve initially prevents fuel flow to both burner sets while fuel is supplied by a start valve and flow means that bypass the pressurizing shutoff valve in the manner specified by the present claims. The claimed invention is therefore considered patentable over the prior art.
